
1. Data Harmonization and Forecasting
Energy Price Series
coal, gas, and oil
Macroeconomic Indicators
inflation and rates
Regional WACC Panels
three regional files
Source Audit
data origin and units
Inflation Alignment
region-specific correction
Panel Harmonization
2026-2035 monthly frame
Seasonal Encoding
month sine and cosine
LSTM Forecaster
temporal price dynamics
GPR Refinement
smoothed forecast path
Forecast-Ready Covariates
fuel forecasts plus inflation
harmonized input
2. Tensor Construction and Regression Modeling
Region Axis
China, Europe, Middle East
Fuel Axis
coal, gas, oil
Project Axis
nine WACC targets
Sensitivity Tensor
region x fuel x project
Scenario Assembly
price-inflation pairs
Feature Integration
P_e, inflation, time
Target Matrix
project-specific WACC
AutoML Regression
cell-wise fitted function
Bagging and Stacking
validated ensembling
Model Selection
best specification
Sensitivity Estimates
capital-cost response
Model-Fit Summary
R², MAPE, RMSE
diagnostics
3. Validation and Interpretation
Forecast Benchmarking
LSTM-GPR versus baselines
Fixed-Origin Baselines
training through 2020
Holdout Validation
later-year stability
Rolling-Origin Validation
one-year-ahead folds
Incremental Fit Assessment
fuel and inflation over trend
Elasticity Diagnostics
10% price-shock translation
Transmission Diagnostics
lagged macro channels
Causal Scope Boundary
bounded interpretation
Regional Comparative Findings
import exposure and buffer
Reproducibility Evidence
clean inputs and diagnostics
Climate-Finance Interpretation
investment-risk implications
Cross-Sectional Evidence and Reproducibility Layer
Harmonized Inputs
cleaned regional panels
Forecast Artifacts
fuel-price and inflation trajectories
Robustness Outputs
holdout and rolling diagnostics
Sensitivity Outputs
elasticities and WACC deltas
Reproducibility Package
figures, tables, and diagnostic files
